Momentary Pushbutton Converter P/N EA4093

Thunder Heart's Momentary Pushbutton Converter is designed to convert the "momentary" signal of a pushbutton hand control switch to the standard "latching" signal compatible with Thunder Heart's (MHC) Micro Harness Controller. This device is typically used for the "kill" switch and "high/low beam" functions on a hand control. The turn signals, horn, and start buttons are of the "momentary" type on all hand controls.

Please refer to the wiring diagram on the back of this sheet when installing the Momentary Pushbutton Converter.
